

Points replacement type conversion kits available to suit most popular Australian makes and models.

We can supply kits or direct fit to the distributor.

BENEFITS OF POINTS REPLACEMENT KITS:

Senses current levels in coil and adjusts dwell to maintain peak energy.

Four times more available energy between 3000-5000 RPM.

Uses Original Ignition Coil (no HEI replacement required or needed.)

Peak current level is reached just prior to spark increasing coil life.

More stable ignition timing.

Increases dwell time at engine startup providing more energy.

Senses incorrectly wired ignitor or if ignition has been left on by mistake and shuts down to protect coil and ignition components.
